FERTILIZER

BASIC REQUIREMENTS

What's in plant food? The three essential nutrients in plant food are **nitrogen (N)**, **phosphorus (P)** and **potassium (K)**. Each plays a role in building healthy plants. Nitrogen encourages growth of leaves and stems while phosphorus and potassium increase flowering and root growth. Plant foods are labeled according to the percentages of each of the ingredients they contain, always in the same order: **N-P-K**. The label indicates the relative amounts of the three essential nutrients with an analysis formula (for example: 15-30-15, 10-10-10, or some other combination).

TIPS & TRICKS

Selecting a plant food There are several types of plant foods. Different concentrations are used to achieve different results or meet different needs. Be sure to read the label of the product that you choose to purchase for more information on how to apply it. Check out our fertilizer aisle for a variety of products.

- **Water-Soluble Plant Foods** start feeding almost instantly through the foliage and roots. To apply this type, mix it with water.
- **Slow-Release Plant Foods** are easy to use and feed slowly and steadily for up to three months. This type should be applied directly into the planting hole and the soil should be watered thoroughly after applying.
- **Organic products** such as **Cow Manure**, **Compost**, **Plant Tone**, **Blood Meal**, **Whitney Farms**, **Miracle Gro Organic Choice** or **Bone Meal** are available and should be worked into the soil before planting. Ask about our organic products area.
